Pillars of climate action

Climate change is already affecting people, economies, and the planet. To address such a complex issue with profound impacts, governments at all levels need to act urgently. But what actions are essential for governments to be able to respond to this challenge?

Is Belize on the right path to deliver effective climate action?

1 ASPIRING LAWS

Making comprehensive laws that support ambitious climate action

2 ROBUST INSTITUTIONS

Setting up robust government structures to plan, implement and monitor climate goals

3 STRONG LEADERSHIP

Establishing strong leadership that can mobilize the whole government to take action

4 COMBAT THE CAUSES

Putting in place strategies and plans to reduce the release of gases that trap heat into the atmosphere

5 ADJUST TO EFFECTS

Implementing plans to help people, businesses and the environment prepare for current and future effects of climate change

6 NATIONAL INVESTMENTS

Reserving money in the budget to implement the plans to fight climate change

7 CLIMATE JUSTICE

Promoting justice and equity by being sensible to the most vulnerable

8 MAP RISKS

Identifying the risks climate change will bring to population, economy and environment

9 BROAD ENGAGEMENT

Actively engaging civil society, private sector and scientists in climate policy

10 GOOD SCIENCE

Using the best science available to guide climate action

11 INTERNATIONAL COMMITMENT

Continuously committing to bold international goals

12 GLOBAL COOPERATION

Cooperating internationally, according to its own capacity

RECIPIENT COUNTRIES

13 PRIVATE RESOURCES

Encouraging private sector investment in climate action

14 LONG-TERM STRATEGY

Having a long-term strategy to sharply reduce the release of gases that trap heat into the atmosphere

15 TRANSPARENCY

Ensuring all climate action information is transparent and accessible to the public
